MERZ AESTHETICS™

Important RADIESSE® Volumizing Filler Treatment Considerations

RADIESSE Volumizing Filler is FDA-approved for subdermal implantation for the correction of moderate to severe facial wrinkles and folds, such as nasolabial folds. After injection, patients may experience redness, bruising, swelling or other local side effects. Most side effects of treatment resolve within a few days. More rare side effects may include swelling that lasts longer, unevenness or firmness in the area injected, and as with any injection, there may be a risk of infection.
